Student Handout

Storyboarding the Ledger Project

Now that you have designed your visual narrative, you will plan out how the LEDs will add to your story.

1. What parts of your visual narrative do you want to highlight, and where will you place the LEDs to highlight those parts?

2. How will highlighting those parts help to tell your visual narrative?

3. Give each of your three LEDs a name. Your names should be descriptive. For example, if an LED is on a house, name that LED "house." If you have two trees side by side and an LED on each one, you can name one "leftTree" and the other "rightTree." Do not use spaces in your names.

4. Write an algorithm, or a specific set of steps, for what you want your LEDs to do. Use the names of your LEDs when referencing each one. Will any of your LEDs be in parallel? What about your algorithm would need parallel LEDs?
